GSX Pro for Microsoft Flight Simulator 2020/2024

Buy for MSFS

The definitive Ground Service add-on

One of the most popular add-on is back with a brand new version, optimized for MSFS 2020/2024. GSX improves all Ground Services like Pushback, Catering, Refueling, Baggage Loading and Marshalling, and adds entirely new services not available as standard, such as Visible Animated Passengers, Cargo Loading, FollowMe Cars, Towbar Pushback, De-icing, Underground Refueling, Walk-in Gates, VGDS Docking Systems and more.

Couatl™ Live update release notes

Version 3.3.6 – February 14th, 2025

- **GSX Pro NEW:** APIS VGDS Smaller variant added. Base model provided by RW Profiles.
- **GSX Pro NEW:** Airport profiles can now be tied to a specific version of the simulator (MSFS 2020 or 2024), using the relevant option in the "Details" page of the Airport customization page.
- **GSX Pro Fix:** PMDG airframe custom settings not being read if the airplane is manually installed in MSFS 2024.
- **GSX (all versions) Fix:** Error with .INI profiles with their name missing a dash after the ICAO code.
- **GSX (all versions) Fix:** Error in some airports after either the Fuel Truck or the Passenger Bus were sent away at the end of their service.
- **GSX (all versions) NEW**: Added the following Handling operators: West Atlantic, Atlantic (UK), Orlando Sandford (USA), Viggo (Netherlands, updated logo), Korea Airport Services (Korea), Air Marshall (Marshall Islands), Seair (Micronesia), Belau (Palau).
- **GSX (all versions) NEW**: Added the following Catering operators: Icelandair (Iceland, improved logo).

Version 3.3.5 – February 8th, 2025

- **GSX Pro NEW:** SDK folder in Addon Manager\couatl\GSX with documentation about GSX Remote Control (C++ sample) and animated doors reacting to Boarding/Deboarding for scenery developers.

Version 4.4.1

Pushback

Animated Passengers

Refueling

Refueling is completely changed with GSX, with support for Underground fuel supply, using a Fuel Hydrant vehicle, with a custom animated Crew, and a working Fuel Counter to refuel progressively, complete with realtime Fuel Price indication. With SimBrief integration, the GSX Fuel service can use the exact Fuel quantity in your dispatched Flight Plan.

Deicing

A new service, exclusive to GSX, to call for Deicing vehicles during Departure if Icing conditions are detected, featuring the new improved MSFS Visual Effect system to show different spraying liquids with different colors according to Fluid Type and Concentration. Deicing In and Out points can be customized for each airplane.

Follow-Me cars

Can't find your way to your gate or a runway ? GSX can help you with a FollowMe Car, which you can call to guide you either to the destination parking, or to reach the assigned runway during Departure.

Baggage Loading

Baggage Loading and Unloading with GSX has never been so realistic. Animated characters, made with custom Motion Capture session will pickup bags using an highly detailed vehicle with an animated Conveyor Belt, using several models of animated Baggage Carts. Compared to the default system, GSX can support two Baggage Loaders operating simultaneously.

Cargo Loading

GSX supports dedicated Loaders for ULD Containers and Pallets. A large variety of different ULD containers and standard Pallets is available, and it changes according to the airplane type. Cargo Loaders can support up to Two Lower Cargo doors, and a Main Cargo door as well, all operating simultaneously.

Catering

GSX Improves the default Catering service, by offering a larger variety of vehicles, with more types appropriate to the region and aircraft type, allowing for a wider range of airplanes to be serviced. A large and ever expanding selection (more than 75 in the first release) of real world operators are included, which are chosen automatically depending on the airport. Catering vehicles comes with animated Crew and custom sounds. Compared to the default system, GSX can support two Catering trucks operating simultaneously.

Global Jetways Replacement

Global Ground Vehicles Replacement

GSX comes with an always expanding library (more than 230 at this time) of different Ground Handling custom liveries for many airports around the world, selected automatically depending on the airport. These vehicles will also automatically populate the airport as "Living World", wandering around automatically, or servicing AI airplanes. It's even possible to use these vehicles as standard Ground Vehicles replacements, without starting GSX, so they will work as default services, with better graphic and model variations.

Multiple voices, with regional Accents

Service vehicles with voices, like Pushback or Deicing feature different regional accents variations and, new to this version, with Female voice variations, since many characters have been expanded to include a selection of both Men and Women. The voice accent is automatically selected based on ICAO country codes. The voice library is always growing and, at this time, we have regional accents for: British, American, Australian, German, French, Greek, Nigerian, Indian, Italian, Japanese, Dutch, New Zealander, Portuguese, Russian, Swedish, Spanish, Turkish and South African.

Works with any aircraft

Although GSX already comes with an airplane database including many default and popular 3rd party airplanes such as Fenix, PMDG, Leonardo, Aerosoft, users can create their own custom aircraft profile, to adapt GSX to any airplane that will eventually be available in the future. Aircraft profiles are very small text files which can be shared by users or supplied by the airplane developers directly. There's a published API airplane or utility developers can use, to add specific GSX integration in their products.

GSX Pro (MSFS)

One of the most popular add-ons is back with a brand-new version, for Microsoft Flight Simulator 2020 and 2024. GSX improves all Ground Services like Pushback, Catering, Refueling, Baggage Loading, Marshalling, and adds entirely new services not available as standard, such as Visible Animated Passengers, Cargo Loading, FollowMe Cars, Towbar Pushback, De-icing, Underground Refueling, Walk-in Gates, VGDS Docking Systems, Lavatory/Water vehicles and more.

This is the only version that works in MSFS 2020/2024, no need to buy anything else.

Requirements
This product works ONLY in Microsoft Flight Simulator (2020/2024) and requires Windows 10/11. The install drive must be formatted in NTFS.
